Theme:

- Reflections

Inspiration:

- Inspired by the struggles in life
- Sometimes we lose motivation in life
- By doing reflections, we can remind ourselves about our purpose in life and be motivated

What I learned:

- When the CSS elements do not show up, use "!important" before the ";"
- "const express = require("express");" is to use the express tool to create the web application
- "app.use(express.static('public'));" is to let the web application use files from the "public" folder

Declaration of AI Tool Used:

AI Tool Used:

ChatGPT

How I Used It:

I used ChatGPT to help with:

1. Understanding assignment requirements
   Example prompt:

"Explain what this CA1 wants me to do. Must be simple and clear."

2. Generating code examples (HTML, CSS, Express)
   Example prompt:

"Give me the Express route code for adding an item using the POST method with the in-memory array."

3. Improving layout and UI design using Bootstrap
   Example prompt:

"Make my list page items look nice with Bootstrap cards."

4. Getting suggestions for enhancements
   Example prompt:

"What features can I add to get an A+ for my CA1 Node.js web app?"

5. Checking whether my app meets the CA1 criteria
   Example prompt:

"Does my app meet all the requirements for an A+?"

AI-Generated Content (Examples in My App):

- Structure of Express routes (add, delete, update)

- HTML layout for pages (form, list, buttons)

- CSS improvements (gradient, padding)

- Suggestions for polish and extra features

How I Used the Responses:

- I read and understood the generated answers

- I modified and applied the code in my way

- I made sure I knew how everything worked before using it

- I did not copy blindly — I learned and built my app
